Human Papillomavirus and Related Cancers, Fact Sheet 2023 (2023-03-10)

I. Key data on HPV and HPV-related cancers

Albania has a population of 1.20 million women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 133 women are diagnosed with cervical cancer and 74 die from the disease.

Cervical cancer ranks as the 5th most frequent cancer among women in Albania and the 2nd most frequent cancer among women between 15 and 44 years of age. Data is not yet available on the HPV burden in the general population of Albania. However, in Southern Europe, the region Albania belongs to, about 3.8% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 68.0% of invasive cervical cancers are attributed to HPVs 16 or 18.
