Human Papillomavirus and Related Cancers, Fact Sheet 2023 (2023-03-10)

I. Key data on HPV and HPV-related cancers

Bahrain has a population of 410,669 women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 21 women are diagnosed with cervical cancer and 12 die from the disease. Cervical cancer ranks as the 8th

most frequent cancer among women in Bahrain and the 8th most frequent cancer among women between 15 and 44 years of age. Data is not yet available on the HPV burden in the general population of Bahrain. However, in Western Asia, the region Bahrain belongs to, about 2.5% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 72.4% of invasive cervical cancers are attributed to HPVs 16 or 18.

Table 1. Crude incidence rates of HPV-related cancers
