Human Papillomavirus and Related Cancers, Fact Sheet 2021 (2021-10-22)

I. Key data on HPV and HPV-related cancers

Brazil has a population of 85.6 millions women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 17743 women are diagnosed with cervical cancer and 9168 die from the disease. Cervical cancer ranks as the 4th most frequent cancer among women in Brazil and the 3rd most frequent cancer

among women between 15 and 44 years of age. About 5.4% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 68.2% of invasive cervical cancers are attributed to HPVs 16 or 18.
