## Human Papillomavirus and Related Cancers, Fact Sheet 2018 (2019-06-17)

### I. Key data on HPV and HPV-related cancers

Indonesia has a population of 93.15 millions women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 32469 women are diagnosed with cervical cancer and 18279

die from the disease. Cervical cancer ranks as the 2nd most frequent cancer among women in Indonesia and the 2nd most frequent cancer among women between 15 and 44 years of age. About 4.0% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 87.0% of invasive cervical cancers are attributed to HPV types 16 or 18.

**Table 1. Crude incidence rates of HPV-related cancers**

	Male	Female
Cervical cancer	-	24.5
Anal cancer	-	-
Vulva cancer	-	-
Vaginal cancer	-	-
Penile cancer	-	-
Oropharynx	0.7	0.3

**Table 2. Burden of cervical cancer**

	Incidence	Mortality
Annual number of new cases/deaths	32469	18279
Crude rate	24.5	13.8
Age-standardized rate	23.4	13.9
Cumulative risk 0-74 years (%)	2.6	1.6
Ranking of cervical cancer (all years)	2nd	2nd
Ranking of cervical cancer (15-44 years)	2nd	2nd

**Table 3. Burden of cervical HPV infection Indonesia**

	No. Tested	% (95% CI)
HPV prevalence in women with normal cytology	301	26.2 (21.6-31.5)
HPV 16/18 prevalence:		
Normal cytology	200	4.0 (2.0-7.7)
Low-grade cervical lesions	-	--
High-grade cervical lesions	-	--
Cervical cancer	230	87.0 (82.0-90.7)

**Figure 1. Comparison of the ten most frequent HPV oncogenic types in Indonesia among women with and without cervical lesions**

\*No data available. No more types than shown were tested or were positive.

### II. Complementary data on cervical cancer prevention

**Table 4. Factors contributing to cervical cancer (co-factors)**

Smoking prevalence (%), women	3.8 [3.0-4.8]
Total fertility rate (live births per women)	2.6
Hormonal contraception use (%) (pill, injectable or implant), among women	49.4
HIV prevalence (%), adults (15-49 years)	0.5 [0.4 - 0.6]

**Table 5. Sexual behaviour**

MEN	
Percentage of 15-year-old who have had sexual intercourse	-
Range of median age at first sexual intercourse	23.1-24.6
WOMEN	
Percentage of 15-year-old who have had sexual intercourse	-
Range of median age at first sexual intercourse	19.0-21.8

**Table 6. HPV vaccine introduction**

HPV vaccination programme	Pilot
Date of HPV vaccination routine immunization programme start	-

**Table 7. Cervical screening practices and recommendations**

Cervical cancer screening coverage, % (age and screening interval, reference)	24.4% (All women aged 30-50 screened every 5y, Kim 2013)
Screening ages (years)	30-50
Screening interval (years) or frequency of screens	5 years

**Figure 2. Estimated coverage of cervical cancer screening in Indonesia, by age and study**

<sup>a</sup> Proportion of women in the total sample of the mentioned age range in the country or region that reported having a Pap smear during a given time period (e.g., last year, last 2, 3, 5 years or ever).
