## Human Papillomavirus and Related Cancers, Fact Sheet 2023 (2023-03-10)

### I. Key data on HPV and HPV-related cancers

Jordan has a population of 3.63 million women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 115 women are diagnosed with cervical cancer and 71 die from the disease.

Cervical cancer ranks as the

11th most frequent cancer among women in Jordan and the 10th most frequent cancer among women between 15 and 44 years of age. Data is not yet available on the HPV burden in the general population of Jordan. However, in Western Asia, the region Jordan belongs to, about 2.5% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 72.4% of invasive cervical cancers are attributed to HPVs 16 or 18.
