Human Papillomavirus and Related Cancers, Fact Sheet 2023 (2023-03-10)

## I. Key data on HPV and HPV-related cancers

Luxembourg has a population of 269,943 women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 24 women are diagnosed with cervical cancer and 10 die from the disease. Cer-

vical cancer ranks as the 11th most frequent cancer among women in Luxembourg and the 4th most frequent cancer among women between 15 and 44 years of age. Data is not yet available on the HPV burden in the general population of Luxembourg. However, in Western Europe, the region Luxembourg belongs to, about 2.6% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 78.7% of invasive cervical cancers are attributed to HPVs 16 or 18.
