Human Papillomavirus and Related Cancers, Fact Sheet 2023 (2023-03-10)

I. Key data on HPV and HPV-related cancers

Poland has a population of 16.9 million women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 3862 women are diagnosed with cervical cancer and 2137 die from the disease.

Cervical cancer ranks as the 6th most frequent cancer among women in Poland and the 3rd most frequent cancer among women between 15 and 44 years of age. About 3.4% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 88.1% of invasive cervical cancers are attributed to HPVs 16 or 18.
