Human Papillomavirus and Related Cancers, Fact Sheet 2023 (2023-03-10)

## I. Key data on HPV and HPV-related cancers

Somalia has a population of 4.61 million women ages 15 years and older who are at risk of developing cervical cancer. Current estimates indicate that every year 1055 women are diagnosed with cervical cancer and 812 die from the disease. Cervical cancer ranks as the 2nd most frequent cancer among women in Somalia and the 2nd most frequent cancer among women between 15 and

44 years of age. Data is not yet available on the HPV burden in the general population of Somalia. However, in Eastern Africa, the region Somalia belongs to, about 4.7% of women in the general population are estimated to harbour cervical HPV-16/18 infection at a given time, and 67.9% of invasive cervical cancers are attributed to HPVs 16 or 18.

**Table 1. Crude incidence rates of HPV-related cancers**

	Male	Female
Cervical cancer	-	13.2
Anal cancer	0.21	0.29
Vulva cancer	-	0.59
Vaginal cancer	-	0.31
Penile cancer	0.06	-
Oropharyngeal cancer	0.18	0.05
Oral cavity cancer	1.11	1.09
Laryngeal cancer	0.87	0.14
